

BrowZine

– en tjänst via Medicinska e-biblioteket

BrowZine hjälper dig hålla koll på intressanta tidskrifter

BrowZine är en tjänst som gör det enklare för dig att läsa, bevaka, dela och spara artiklar ur de tidskrifter du har tillgång till via Medicinska e-biblioteket, Region Kalmar län. Du kan skapa en personlig bokhylla med dina favorittidskrifter och få notiser när nya artiklar publiceras eller när ett nytt nummer av tidskriften kommer ut.

Du når BrowZines webbversion direkt från Medicinska e-biblioteket. Du kan också välja att ladda ner appen till din datorplatta eller smarttelefon.

The screenshot shows the BrowZine Library interface. At the top, there are navigation links: "BrowZine Library", "My Bookshelf", and "My Articles". On the right, it says "Access Provided By Medicinska e-biblioteket Kalmar län" with a help icon and a mobile device icon. The main content area is divided into two sections. The left section, titled "ACCESS PROVIDED BY", features the "Medicinska e-biblioteket" logo and the text "– för dig som är anställd inom Region Kalmar län". Below this is a search bar labeled "FIND JOURNAL BY TITLE, SUBJECT, OR ISSN" with a magnifying glass icon. The right section, titled "BROWSE SUBJECTS", lists several subject categories, each with a folder icon: "Core Title Lists", "Health Services Administration", "Kinesiology and Rehabilitation", "Mathematical and Physical Sciences", "Medical Science and Biomedicine", "Medical Specialties", "Molecular and Medical Biology", and "Nursing and Allied Health". Two red arrows point to the search bar and the "Molecular and Medical Biology" category. Two white callout boxes with black text provide instructions: "I sökrutan kan du söka på ämne, titel eller ISSN" (In the search box you can search by subject, title or ISSN) and "Du kan också välja ämnesområde och klicka dig fram" (You can also choose a subject area and click through).

The screenshot shows the website for the journal "Nursing & Health Sciences". The top navigation bar includes "BrowZine Library", "My Bookshelf", and "My Articles". The journal's SJR score is 0.563. The left sidebar, highlighted with a red box, contains a list of years from 2022 to 2005, with "2022" and "Vol 24 Issue 1" selected. Below the sidebar is a "BROWSE RELATED SUBJECTS" section with a link to "Nursing - General/Interdisciplinary". The main content area displays three articles:

- A call to action for an inclusive model of shared decision-making in healthcare**
pp. 3-6 - H. Misae; Tsutsumi, Masae
- Effect of non-alcoholic beer containing matured hop bitter acids on mood states in healthy adults: A single-arm pilot study**
pp. 7-16 - Fukuda, Takafumi; Akiyama, Shiori; Takahashi, Kazuyuki; ... Ano, Yasuhisa
This study aimed to investigate the effect of non-alcoholic beer containing matured hop bitter acids on mood states among healthy adults older than 20 years. This study was an open-label longitudinal intervention design in which each participant served as their control. For 3 weeks, we evaluated the effect of non-alcoholic beer containing 35 mg of matured hop bitter acids on mood, sleep quality, and work performance. The data of 97 participants (age range: 23-72 years, median age: 42) were analyzed. After the intervention, we found that matured hop bitter acids significantly improved total mood state, including anxiety, depression, fatigue, and vig...
- Midwifery scale to support shared decision-making for unplanned pregnancies: A cross-sectional study**
pp. 17-33 - Ueno, Yoko; Murakami, Mari; Hattori, Minoru; ... Okamura, Hitoshi
Midwives significantly support women with unplanned pregnancies-promoting a shared perspective on the decision-making process. This study aimed to develop a scale to support midwives to self-assess their practice of this vital role. Following the derivation of scale items and pilot testing, the final version of the scale was administered to 531 midwives to establish internal consistency and construct criterion-related validity. Through exploratory factor analysis, 35 items with a five-factor structure were retained to form the midwifery practice self-assessment scale to promote shared decision-making in women with unplanned pregnancies. These fact...
- "I pretty much followed the law, and there weren't any decisions to make": A qualitative study of self-advocacy experiences of men with cancer**
pp. 34-43 - Thomas, Teresa Hagan; Hadley, Makenna L.; Nilsen, Marci Lee
Current conceptualizations of patient self-advocacy focus on women with cancer, leaving knowledge of male self-advocacy deficient. The purpose of this study is to describe the key components of self-advocacy among men with cancer. Adult (≥18 years old) men with a history of invasive cancer were recruited from cancer clinics and registries. Trained researchers led individual semi-structured interviews regarding participants' challenges, how they overcame those challenges, and barriers and facilitators to their self-advocacy. All interviews were analyzed using descriptive content analysis methods and synthesized into major themes. These th...
- Patient participation in healthcare activities: Nurses' and patients' perspectives in Taiwan**
pp. 44-53 - Kao, Hsueh-Fen S.; Hung, Chang-Chiao; Lee, Bih-O; ... Moreno, Oscar
Patient participation in healthcare activities is key to producing successful patient-centered care. However, little is known about both nurses' and patients' perspectives regarding patient participation in East Asia. This paper compared and contrasted perspectives of patient participation in healthcare activities between nurses and patients, using a qualitative study with a purposive sample of 39 nurses and 15 patients. A semi-structured interview was applied to focus groups for nurses, and to face-to-face interviews for patients. Content analysis was utilized to analyze the data, and common themes and subthemes were identified showing three similarit...

Burnout, compassion fatigue, and resilience among healthcare professionals

1 | INTRODUCTION

Healthcare professionals face numerous challenges and multiple stressors in their practice – such as time constraints, inadequate support, and exposure to trauma, morbidity, and mortality. Such stressors seem to be worsening, particularly in an environment of international pandemic, and few healthcare environments can be consistently described as predictable, well-funded, and calm. Consequently, the importance of protecting staff against burnout and building workplace resilience has received increasing attention. Healthcare professionals commonly work with limited resources and inadequate support, impeding their capacity to deliver the care they aspire to provide. This can culminate in burnout, secondary traumatic stress, and compassion fatigue, a state that is uncommon among the general population but all too common in healthcare professionals. Compassion fatigue affects almost every aspect of positive job satisfaction: job performance and satisfaction, workplace wellness, patient outcomes, as well as individual health and well-

1.1 | Burnout and compassion fatigue

The professional environment of healthcare is often characterized by significant psychological stressors that can contribute to emotional exhaustion, burnout, and compassion fatigue. Healthcare professionals are often exposed to the pain and trauma of patients and their families. Healthcare professionals' desire to meet the physical and psychological needs of patients frequently exceeds their ability to provide the required support, leading to compassion fatigue, also called secondary traumatic stress (Ruiz-Fernández, Pérez-García, & Ortega-Galán, 2020). This fatigue is often experienced as a range of psychosocial and physical health issues, including healthcare workers distancing themselves from patients and colleagues, and having feelings of powerless, cynicism, and reduced work satisfaction (Kharatzadeh, Alavi, Mohammadi, Visentin, & Cleary, 2020).

Burnout involves emotional exhaustion, lack of professional accomplishment, and depersonalization (Da Costa & Pinto, 2017) resulting from continuous exposure to stressors in the workplace and
